

Print this page on standard 8.5" x 11" paper at 1:1 resolution. If your printing software says it will crop the image to fit, that's ok.

Cut out the template above with enough border around it so you can stick it with tape to the surface you want to mount your motor to.

Drill the holes mark with the  symbols.

The "dotted" line represents the edge of the surface if you are front mounting the motor so there is enough gap between the edge of your material and the spinning shaft center hole.

We have created a special video on the Monster Guts: Mini Motor product page that shows exactly how to do this process at: www.monsterguts.com
